Dear Hiring Manager,

I am writing to express my interest in opportunities where I can contribute my skills as a Full Stack Developer and Data/ML Engineer. With a master's degree in computer science (May 2025) from Texas A&M University–Corpus Christi, hands-on experience across full-stack development, distributed systems, and machine learning, and a strong record of academic and industry projects, I bring a well-rounded and practical technical foundation.

In my current role as a **Full Stack Developer at TechPortal LLC**, I work on production-grade application modules using **React.js, Next.js, Node.js, and Supabase**. My responsibilities include building scalable front-end components, implementing REST APIs, integrating databases, optimizing UI/UX flows, and collaborating directly with the CEO and engineering team in an Agile environment. I follow best practices around code quality, version control, documentation, and iterative feature delivery.

Previously, as a **Full Stack Developer Intern at Verzeo** and **Frontend Developer at Skill Safari**, I built and deployed numerous data-driven web applications using **React.js, Node.js, SQL, and modern JavaScript frameworks**, optimizing performance, reducing load times, and ensuring seamless backend integration. I also contributed to the **Smart Hire Solutions** platform, where I developed interactive dashboards, improved data flow efficiency, and enhanced load speeds by 30%.

Alongside my software engineering experience, I have led and completed several advanced academic and machine learning projects. Notably, I conducted **LLM adversarial safety research**, achieving a 90% jailbreak success rate and developing an automated prompt mutation framework. I also engineered a **Distributed Messaging System** using Kafka, RabbitMQ, and Pulsar; built a **real-time Driver Drowsiness Detection** system using OpenCV; implemented a full **Fibonacci Heap** in Python and Java; and developed multiple ML applications including house price prediction models and inventory classification systems. These projects demonstrate my strengths in problem-solving, algorithmic thinking, and analytical modeling.

My technical tools include **Java, Python, C++, GoLang, JavaScript, React.js, Next.js, Node.js, SQL, PostgreSQL, MongoDB, Docker, Kafka, RabbitMQ, Power BI, Tableau, AWS, Google Cloud**, and a broad range of machine learning and data engineering tools. My certifications further reinforce my skill set, including the **Google Data Analytics Professional Certificate, Microsoft Power BI Data Analyst Associate, AWS Solutions Architecture Simulation, Palo Alto Beacon Cybersecurity Training**, and others.

I am motivated by roles that allow me to build scalable applications, develop efficient backend systems, contribute to data-driven decision-making, and work across the full software development lifecycle. I thrive in collaborative, fast-paced environments, and I enjoy solving complex technical challenges that deliver meaningful impact to users and organizations.

Thank you for considering my application. I would welcome the opportunity to discuss how my background, technical experience, and project work align with your team's needs.

Sincerely,

Mohamad Hisham Saif
